#Skills

Technologies

- HTML
- CSS
- JavaScript
- PHP
- ASP.Net with C# Razor

Frameworks / Libraries

- Angular
- AngularJS
- jQuery
- Bootstrap
- MVC
- Vue

Tools

- Adobe Illustrator
- Visual Studio Code
- Visual Studio 2017
- WebStorm
- Version Control Systems

Databases

- MySQL
- Cloud Firestore
- MongoDB

#Projects

Current Project – Cattle Database

Scalable WebApp using - C# Razor, ASP.Net MVC 5

- Used Entity Framework to create and update the database
- Implemented Identity user authentication
- Created a form to add cattle information to database
- Added CRUD ability to create, read, update and delete cow records

WebApp for Tracking Freelance Clients

Client balance and information tracking app – Angular 6, Google Firebase

- Utilized Google's Firebase to register and validate users
- Provided ability to add, edit and delete clients as needed
- Showed total combined amount owed by clients

WebApp for Ninjas

Ninja tracking and listing app – just to try AngularJS

- Displayed list of current ninjas with a picture, their price and belt color
- Used a form so the user could add their own ninja to the list
- Gave option to send a message to the developer

#Education

Central Ohio Technical College   2009

Associates of Applied Business Degree in Accounting   GPA 3.4

#Employment

US Jersey Cattle Association   2018

Application Developer

- Created pages for new site version Cattle Prefix Management, to reflect SQL data records that link members to their specific cattle.
- Built WPF application for sending emails to members using ASP.Net to incorporate existing email template and report factories codebase.
